PROFESSIONAL SUMMARY

- **Java Full Stack Developer** with 5+ years of experience building scalable enterprise applications using **Java 8/11/17**, **Spring Boot**, **Microservices** architecture, and **REST APIs**
- Strong experience developing backend systems using **Java**, **Spring Boot**, and **Microservices**, supporting high-volume transactional systems in banking and healthcare domains
- Expertise in designing and developing **RESTful APIs** using **Spring Boot**, **Spring MVC**, and **Hibernate/JPA**, enabling secure and efficient integration across distributed systems
- Hands-on experience implementing Microservices architecture using **Java** and **Spring Boot**, improving scalability, modularity, and performance of enterprise applications
- Experience working with **Apache Kafka** for event-driven architecture, enabling asynchronous processing and real-time data handling across microservices
- Strong experience building and deploying applications on **AWS** cloud using **EC2**, **S3**, **RDS**, **Lambda**, and **EKS**, along with **containerization** using **Docker** and **Kubernetes**
- Proficient in **frontend** development using **Angular (8-12)** and **React.js**, developing responsive UI components and integrating them with backend **REST APIs**
- Experience working with relational and **NoSQL** databases including **PostgreSQL**, **MySQL**, **MongoDB**, and **Redis**, with focus on query optimization and performance tuning
- Strong understanding of core **Java** concepts including multithreading, collections, concurrency, and exception handling for building robust backend systems
- Experience implementing security using **Spring Security**, **OAuth2**, and **JWT**, ensuring secure access control and data protection across applications
- Hands-on experience with **CI/CD** pipelines using **Jenkins**, **GitHub Actions**, and **Azure DevOps**, enabling automated build, test, and deployment processes
- Experience working in **Agile**/**Scrum** environments, collaborating with cross-functional teams, handling production issues, and delivering high-quality software solutions

TECHNICAL SKILLS

Programming Languages: Java (8/11/17), SQL, JavaScript, TypeScript
Backend Technologies: Spring Boot, Spring MVC, Spring Framework, Spring Data JPA, Hibernate, Microservices Architecture, RESTful Web Services
Frontend Technologies: Angular (8-12), AngularJS, React.js, HTML5, CSS3, Bootstrap
Cloud Platforms: AWS (EC2, S3, RDS, Lambda, EKS, IAM, CloudWatch), Microsoft Azure
Messaging & Streaming: Apache Kafka, RabbitMQ
Databases: PostgreSQL, MySQL, Oracle, MongoDB, Redis
DevOps & CI/CD: Docker, Kubernetes, Jenkins, GitHub Actions, Azure DevOps
Tools & Technologies: Git, Maven, Gradle, JIRA, Swagger, Postman
Testing Frameworks: JUnit, Mockito
Security: Spring Security, OAuth2, JWT
Methodologies: Agile, Scrum

PROFESSIONAL EXPERIENCE

Client: Insmed Incorporated, MO **Nov 2025 - Present**
Role: Java Full Stack Developer
Responsibilities

- Designed scalable backend services using **Java 17**, **Spring Boot**, and **REST APIs** to support patient onboarding and healthcare workflow processing across distributed systems
- Built and enhanced **RESTful APIs** using **Spring Boot**, **Spring MVC**, and **Hibernate/JPA**, enabling secure and efficient communication between frontend applications and backend services
- Designed and implemented microservices architecture using **Java** and **Spring Boot**, improving modularity, scalability, and independent deployment of healthcare services
- Developed loosely coupled services for patient workflows, enabling better system maintainability and reducing dependency on **monolithic components**
- Implemented **Apache Kafka** for event-driven architecture, enabling asynchronous processing of patient status updates and system events
- Built **Kafka** producer and consumer services, improving data flow efficiency and system scalability across

microservices

- Designed dynamic **UI components** using **React.js**, **JavaScript**, **HTML5**, and **CSS3**, enabling real-time visualization of healthcare data
- Integrated React frontend with backend **REST APIs**, ensuring seamless data flow and improved user experience
- Deployed applications on **AWS (EC2, S3, RDS, EKS)**, building scalable and highly available cloud-native infrastructure
- Containerized applications using **Docker** and **Kubernetes**, improving deployment consistency and environment portability
- Implemented Spring Security with **OAuth2** and **JWT**, securing **API**s and enforcing role-based access control for sensitive healthcare data
- Optimized **PostgreSQL** queries and indexing strategies, improving **API** response time by ~25% and enhancing application performance
- Implemented **Redis caching** for frequently accessed data, reducing **database load** and improving response times
- Built and maintained **CI/CD** pipelines using **Jenkins** and **GitHub Actions**, automating build, test, and deployment workflows
- Created unit and integration tests using **JUnit** and **Mockito**, improving code quality and reducing production defects
- Used **Postman** for **API testing** and validation and documented APIs using **Swagger**/**OpenAPI**, improving development and integration efficiency
- Resolved production support, debugging, and log analysis using **CloudWatch**, ensuring system stability and faster issue resolution
- Collaborated with **cross**-**functional** teams in **Agile/Scrum** environment, participating in sprint planning, code reviews, and feature delivery

Environment: Java 17, Spring Boot, Microservices Architecture, RESTful APIs, Apache Kafka, React.js, AWS (EC2, S3, RDS, Lambda, EKS, CloudWatch), Docker, Kubernetes, PostgreSQL, Redis, Jenkins, GitHub Actions, Swagger/OpenAPI, Postman

Client: Bank of New York Mellon (BNY), NYC **Jan 2024 - Oct 2025**
Role: Java Full Stack Developer
Responsibilities

- Developed scalable backend services using **Java 11**, **Spring Boot**, and **REST APIs** to support high-volume banking transactions and financial workflow processing
- Built and enhanced **RESTful APIs** using **Spring Boot**, **Spring MVC**, and **Hibernate/JPA**, enabling secure integration with internal banking systems and third-party financial services
- Designed and implemented microservices architecture using **Java** and **Spring Boot**, improving system scalability, modularity, and transaction processing efficiency
- Created loosely coupled **microservices** for transaction processing and reporting, reducing system dependencies and improving maintainability
- Integrated **Apache Kafka** for event-driven processing, enabling asynchronous transaction handling and improving system throughput
- Built **Kafka** producer and consumer services to handle real-time financial data streams across distributed systems
- Developed frontend dashboards using **Angular 12**, **TypeScript**, **HTML**, and **CSS**, enabling real-time monitoring of financial transactions and reports
- Integrated **Angular frontend** with **backend REST APIs**, ensuring seamless data flow and improved user experience for business users
- Deployed applications on **AWS** and **Azure** cloud platforms, ensuring high availability and scalability for distributed banking systems
- Containerized applications using **Docker** and orchestrated deployments using **Kubernetes**, improving deployment reliability and environment consistency
- Implemented **Spring Security** with **OAuth2** and **JWT**, securing financial data and enforcing role-based access control across applications
- Optimized **SQL queries** and indexing in **Oracle** and **PostgreSQL**, improving transaction processing performance by ~25% and reducing **API latency**
- Implemented **Redis caching** for frequently accessed financial data, improving response time and reducing database load
- Built and maintained **CI/CD** pipelines using **Jenkins** and **Azure DevOps**, automating build, test, and deployment workflows
- Delivered unit and integration tests using **JUnit** and **Mockito**, improving code quality and reducing production defects
- Used Postman for **API** testing and validation and documented **APIs** using **Swagger/OpenAPI** for better integration and developer experience
- Resolved production support, debugging, and log analysis to resolve high-priority issues and ensure system stability in

critical banking applications
- Collaborated with cross-functional teams in **Agile/Scrum** environment, participating in **sprint planning**, **code reviews**, and feature delivery

Environment: Java 11, Spring Boot, Microservices Architecture, RESTful APIs, Apache Kafka, Angular 12, AWS, Microsoft Azure, Docker, Kubernetes, Oracle, PostgreSQL, Redis, Jenkins, Azure DevOps, Swagger/OpenAPI, Postman

Client: Cognizant, Chennai IND **Aug 2021 - May 2022**
Role: Java Full Stack Developer (Programmer Analyst)
Responsibilities
- Engineered backend services using **Java 8, Spring Boot, and REST APIs** to support customer account management and transaction processing workflows
- Built and enhanced **RESTful APIs** using **Spring Boot** and **Spring MVC**, enabling integration with internal systems and external banking services
- Implemented business logic using **Spring Boot** and **Hibernate**/**JPA**, supporting transactional operations and improving data consistency
- Designed modular service components following **microservices**-based patterns, improving maintainability and enabling independent development of features
- Engineered frontend components using **Angular 10**, **TypeScript**, **HTML**, and **CSS**, enabling dynamic user interfaces for account and transaction modules
- Integrated Angular frontend with backend **REST APIs**, ensuring seamless data flow and improved user experience across application modules
- Worked with **MySQL** and **MongoDB databases**, writing optimized **SQL queries** and improving data retrieval performance
- Implemented authentication and session handling using **Spring Security**, ensuring secure access to application features
- Delivered batch processing jobs using **Spring Batch** to handle scheduled data processing and reporting tasks efficiently
- Participated in **CI/CD** processes using **Jenkins**, supporting automated build and deployment workflows across development environments
- Developed unit and integration tests using **JUnit** and **Mockito**, improving code quality and reducing defects
- Used Postman for **API** testing and validation and collaborated with **QA teams** for testing, debugging, and issue resolution
- Participated in **Agile/Scrum** environment, contributing to **sprint planning**, daily stand-ups, and timely delivery of features

Environment: Java 8, Spring Boot, RESTful APIs, Microservices Architecture, Angular 10, MySQL, MongoDB, Spring Security, Spring Batch, Jenkins, JUnit, Mockito, Swagger, Postman

Client: Birlasoft, IND **May 2020 - Jul 2021**
Role: Java Developer
Responsibilities:
- Implemented web application modules using **Core Java, JSP, Servlets, and JDBC**, supporting internal business workflows and data processing requirements
- Implemented **MVC architecture** using **Spring Framework**, improving code structure and enabling separation of business logic and presentation layers
- Built and enhanced basic **REST APIs** for internal data exchange between frontend and backend modules
- Implemented frontend components using **HTML, CSS, JavaScript, and AngularJS**, enabling user interaction for form-based workflows
- Integrated frontend with backend services, ensuring proper data flow and application functionality across modules
- Worked with **MySQL** database, writing **SQL** queries for **CRUD** operations and supporting data retrieval requirements
- Assisted in debugging and resolving application issues, improving system stability and reducing defects in production
- Participated in application testing and validation, ensuring functionality and performance of developed modules
- Supported deployment activities and environment setup, assisting senior developers in release processes
- Wrote unit test cases using **JUnit**, improving code quality and ensuring basic test coverage
- Used Postman for **API** testing and validation and collaborated with **QA** teams for testing and issue resolution

Environment: Core Java, JSP, Servlets, JDBC, Spring Framework, REST APIs, AngularJS, HTML, CSS, JavaScript, MySQL, JUnit, Postman

EDUCATION
- **Master of Science in Computer Science** University of Central Missouri, Warrensburg, MO
- **Bachelor of Technology in Electronics Engineering & Computers** VR Siddhartha Engineering College, India

CERTIFICATIONS

- AWS Certified Solutions Architect - Associate | Amazon Web Services
- Microsoft Certified: Azure Administrator Associate | Microsoft Azure
