

ANUDEEP ALLAMSETTY

Full Stack Java Developer | Spring Boot · React/Angular · AWS/Azure · Microservices · Kafka

(840) 888-9831 | anudeep0612@gmail.com | [linkedin.com/in/anudeep06](https://www.linkedin.com/in/anudeep06) | github.com/Anudeep-A-Java | [Portfolio](#)

PROFESSIONAL SUMMARY

Full Stack Java Engineer with 4+ years building cloud-native microservices and enterprise web applications across banking and healthcare. Improved API and transaction performance by 25% through query tuning and Redis caching, built Kafka event-driven pipelines for real-time financial and patient data, and deployed containerized services to AWS EKS and Azure AKS. End-to-end ownership from React/Angular UI through Spring Boot services to Kubernetes deployment. AWS Certified Solutions Architect – Associate and Azure Administrator Associate. Uses GitHub Copilot and LLM-assisted workflows to ship tested code faster.

TECHNICAL SKILLS

Languages: Java 8/11/17, JavaScript, TypeScript, Python, SQL

Backend & Architecture: Spring Boot, Spring MVC, Spring Data JPA, Spring Security, Spring Batch, Hibernate/JPA, Microservices, RESTful APIs, Event-Driven Architecture, Distributed Systems, Design Patterns

Core Java: Collections Framework, Multithreading & Concurrency, Streams API & Lambdas, Exception Handling, JVM tuning

Messaging & Streaming: Apache Kafka, RabbitMQ

Frontend: React.js, Angular (8–12), AngularJS, TypeScript, JavaScript, HTML5, CSS3, Bootstrap, Angular Material, SPA, Responsive UI

Cloud: AWS (EC2, S3, RDS, Lambda, EKS, IAM, CloudWatch, SNS, SQS), Azure (App Services, AKS, Monitor)

DevOps & CI/CD: Docker, Kubernetes, Jenkins, GitHub Actions, Azure DevOps, Maven, Gradle

Databases & Caching: PostgreSQL, Oracle, MySQL, MongoDB, Redis; query optimization, indexing, caching strategy

Security: Spring Security, OAuth2, JWT, Role-Based Access Control (RBAC)

Testing & API Tools: JUnit, Mockito, Postman, Swagger/OpenAPI, SoapUI

Monitoring & Collaboration: SonarQube, Splunk, ELK Stack, CloudWatch, Git, GitHub, Bitbucket, JIRA, Agile/Scrum, Code Reviews

AI-Assisted Development: GitHub Copilot, LLM/GenAI-assisted coding, prompt-driven testing, refactoring, root-cause analysis

CERTIFICATIONS

AWS Certified Solutions Architect – Associate | [Credly badge](#)

Microsoft Certified: Azure Administrator Associate | [Microsoft Learn credential](#)

PROFESSIONAL EXPERIENCE

Java Full Stack Developer, Insmmed Incorporated (Healthcare)

Nov 2025 - Present

- Re-architected a monolithic patient-onboarding module into Java 17 / Spring Boot microservices, improving modularity and enabling independent deployment of healthcare services, so teams could release patient workflow features separately
- Built a Kafka event-driven pipeline with producer and consumer services for real-time patient status updates, decoupling services, enabling asynchronous processing of system events, and improving throughput across microservices
- Cut API response time by 25% through PostgreSQL query and indexing optimization; added Redis caching for frequently accessed data, reducing database load and improving performance on high-traffic healthcare endpoints
- Built and enhanced RESTful APIs with Spring Boot, Spring MVC, and Hibernate/JPA, enabling secure communication between React frontends and backend services and supporting patient onboarding and healthcare workflow processing
- Shipped React.js dashboards (JavaScript, HTML5, CSS3) for real-time healthcare data visualization, integrated with backend REST APIs to deliver a seamless, responsive user experience for healthcare workflows
- Implemented Spring Security, OAuth2, and JWT-based RBAC across REST APIs, strengthening authentication and authorization controls for sensitive healthcare workflows and patient data
- Deployed containerized services (Docker, Kubernetes) to AWS (EC2, S3, RDS, EKS) through Jenkins and GitHub Actions CI/CD pipelines, automating build, test, and deployment and improving environment consistency and portability
- Automated API validation, log analysis, monitoring, and batch-processing workflows using Python scripts, reducing repetitive operational checks across AWS environments
- Developed JUnit and Mockito unit/integration tests and standardized API validation with Postman and Swagger/OpenAPI, strengthening regression coverage and supporting reliable releases
- Used GitHub Copilot and LLM-assisted workflows to accelerate test generation, refactoring, root-cause analysis, and API documentation, speeding up Spring Boot microservice delivery while maintaining enterprise coding standards
- Handled protected health information (PHI) following HIPAA guidelines with role-based access and secure API design
- Handled production support and log analysis with CloudWatch; worked in Agile/Scrum with sprint planning and code reviews

Java Full Stack Developer, Bank of New York (BNY) (Banking)

Jan 2024 - Oct 2025

- Built Java 11 / Spring Boot microservices for high-volume banking transactions, improving scalability and reducing inter-service dependencies across transaction processing, reporting, and real-time financial workflows
- Engineered Kafka producer and consumer services for real-time financial transaction streaming, enabling asynchronous event processing and reducing coupling across distributed banking microservices
- Improved transaction processing performance by 25% by optimizing Oracle and PostgreSQL queries and indexing, reducing API latency; added Redis caching for frequently accessed financial data to cut database load and speed up responses
- Built RESTful APIs with Spring Boot, Spring MVC, and Hibernate/JPA for secure integration with internal banking systems and third-party financial platforms, enabling reliable data exchange across distributed enterprise systems
- Delivered Angular 12 (TypeScript, HTML5, CSS3) dashboards for real-time monitoring of transactions, operational metrics, and financial reports, giving business and operations teams clear, up-to-date visibility into banking activity
- Implemented retry and circuit-breaker patterns across distributed Spring Boot services, improving fault isolation and service resilience during downstream failures and transient connectivity issues
- Built CI/CD pipelines with Jenkins and Azure DevOps to automate build, test, deployment, and release management, reducing manual deployment effort and improving release reliability across environments
- Contributed to enterprise modernization and cloud transformation by migrating banking services to Azure (App Services, AKS) and containerizing them with Docker, improving scalability, deployment reliability, and environment consistency
- Implemented Spring Security with OAuth2 and JWT role-based access control to protect sensitive customer and financial data
- Used SonarQube, Splunk, and Azure Monitor for code quality, monitoring, and production incident analysis; wrote JUnit and Mockito tests; used Postman and Swagger/OpenAPI for API validation and documentation
- Applied GitHub Copilot and GenAI-assisted workflows to speed up SQL optimization, unit test coverage, and production issue investigation, improving delivery speed across distributed banking applications
- Collaborated with cross-functional Agile/Scrum teams in sprint planning, code reviews, backlog refinement, and feature delivery, supporting secure, real-time banking operations and steady delivery of cloud-native financial services

Java Full Stack Developer, Cognizant (India)

Aug 2021 - May 2022

- Built Spring Boot and Hibernate/JPA REST APIs and microservices-style components for customer account and transaction processing, enabling integration with internal systems and external banking services
- Developed Angular 10 and TypeScript modules integrated with Spring Boot REST APIs, delivering responsive account-management and transaction-processing workflows for banking users
- Used Kafka and RabbitMQ for asynchronous messaging and real-time event processing across enterprise modules; built scheduled Spring Batch jobs that automated data processing and reporting tasks efficiently
- Implemented authentication and session handling with Spring Security to secure access to application features; worked with MySQL and MongoDB and optimized SQL queries to improve data retrieval performance
- Supported Jenkins CI/CD, wrote JUnit and Mockito tests, validated APIs with Postman, and worked in Agile/Scrum sprints
- Implemented business logic with Spring Boot and Hibernate/JPA to support transactional operations, improving data consistency across customer account and transaction modules and reducing data-handling defects
- Designed modular, microservices-style service components that reduced dependencies, improved maintainability, and enabled independent development and delivery of application features

Java Developer, Birlasoft (India)

Nov 2020 - May 2021

- Developed web application modules and REST APIs using Core Java, JSP, Servlets, JDBC, and Spring MVC, supporting internal business workflows and structured data processing
- Built AngularJS, HTML, CSS, and JavaScript UI modules for form-based workflows, integrated with backend services to ensure proper data flow across modules; wrote MySQL queries for CRUD operations and reporting
- Wrote JUnit tests, validated APIs with Postman, and supported QA, debugging, and release activities in Agile/Scrum sprints
- Assisted in debugging and resolving application issues, improving system stability and reducing production defects

PROJECTS

AI-Powered Resume & Interview Prep Platform | Java 17, Spring Boot, React, Kafka, Redis, PostgreSQL, AWS EC2

- Built a full-stack app that uses an LLM API to generate tailored, ATS-optimized resume bullets and mock interview questions from a user's job description and work history, delivering personalized, job-specific interview prep
- Used Kafka to process AI generation requests asynchronously and Redis to cache responses, keeping the UI responsive and latency low under concurrent load; deployed on AWS EC2 with PostgreSQL for user data persistence

EDUCATION

M.S. Computer Science - University of Central Missouri, USA

Jan 2024

B.Tech - Velagapudi Ramakrishna Siddhartha Engineering College, India

May 2021
